Study of Recreational Land and Open Space  
Using SKYLAB Imagery  
Monthly Progress Report, May 1974

Substantial effort was devoted during this reporting period to premission analysis activities in connection with the S192 data. This work will enable the project to handle S192 data for the project test site expeditiously as soon as it becomes available. Preliminary processing of tape data for another site was conducted to check out recently developed software and to test its compatibility for use with S192 data. The resulting data are also being used to provide preliminary experience with the data output and to assess the output with respect to data quality and interpretation.

This data analysis effort on preliminary S192 data will continue during June.
